DEKA Dental Lasers

What is Laser Dentistry?

DEKA Laser therapy uses light energy to replace traditional dental instruments. With this advanced technology, the patient experiences less pain, swelling, and bleeding. DEKA is effectively used for a wide range of soft tissue procedures including:

- Cold Sores and Traumatic Ulcers
- Tongue Tie and Frenectomy Release
- Periodontal Disease and Bacterial Reduction
- Gum Overgrowth
- Smile Makeover
- Implant Surgery and Maintenance

Before and After Smile Makeover

Soft Tissue Laser Therapy

Get the Exact Results you Want with Less Pain

DEKA lasers allow dentists to precisely contour tissue to deliver ideal results as gently as possible. Laser treatment is quick, comfortable, and effective.

Why is Laser Therapy the Ideal Treatment?

Laser Dentistry has proven to be one of the most exciting advancements in dental technology. Compared to traditional surgical methods, dental lasers reduce pain, swelling, bleeding, and the presence of bacteria.

"The DEKA CO₂ Laser provides our patients with a pleasant, safe and effective treatment experience."

Is Laser Therapy Right for You?

DEKA dentists are expertly trained and incorporate laser technology in their practice to provide the best care for their patients. Your dentist will evaluate you to see if you are a good candidate for laser therapy and will provide you with eyewear before starting treatment. Since the laser is non-contact, it is more precise and less traumatic than traditional options. After the procedure, you will experience less pain and faster healing!

DEKA Frenectomy

The DEKA CO₂ laser is a non-contact laser meaning there is no harsh drilling, cutting or scraping.

The DEKA CO₂ Laser

The benefits of using the DEKA CO₂ Laser include bacterial reduction and accelerated healing time. Patient discomfort is minimal and postoperative complications such as bleeding and infections are greatly reduced.

Benefits for Patients

Patients who have Laser Therapy experience:

- Faster healing and minimal bleeding
- Lower chance of infection
- Reduced need of sutures and Post-Op Pain Medication
